WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Buy a 120 mm cast or steel handwheel with a spinner knob and a hub about 40 mm across and 30 mm long.

Bore the hub to take a round Tr20 x 4 nut (bronze or steel) as a press fit; or weld a steel hex nut into the hub, square to its face.

Pin the nut with a 4 mm pin across the hub if it is pressed in.

Face the hub's bottom flat so it bears evenly on the thrust washer.

Fit: sits on a 2 mm thrust washer on the base plate, round the screw.

Turning it raises or lowers the table 4 mm a turn.

The rim is 2.5 mm clear of the column. Reach it under the shield front.

Check: the table runs the full 100 mm with light hand force.
