WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Sides (make 2, a left and a right): 170 x 282 mm blanks; fold a 20 mm foot outward along the bottom; the side stands 262 mm tall.

Drill each foot 6.5 mm, 10 mm out from the fold, 25 and 145 mm from its front end.

Front: 233 x 210 mm, with a window 170 x 130 mm, 30 mm up from its bottom edge; rivet a perforated panel behind the window.

Hinges: two 30 mm butt hinges riveted to the left side and the front, 40 mm from the top and bottom of the front. Latch on the right.

Fit: the feet sit on the base plate with two M6 screws each; the sides stand 115 mm each side of the axis, 75 mm behind it to 95 mm in front.

The front's bottom edge is 60 mm above the bench, so the handwheel is reached under it with the front shut.

Check: the front swings open and latches; deburr every cut edge.
