

REV	DESCRIPTION	DATE	BY
P1	Making sketch for the prototype build plan	2026-10-01	AC

WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Blank 120 x 215 mm of 3 mm steel. Fold an 18 mm foot at one end, 90 degrees, toward the fan side; the upright then stands 197 mm tall.

Intake hole 112 mm across, centre 137 mm above the underside of the foot, centred across the width. Cut with a hole saw or by chain drilling.

Four 4.4 mm holes on a 105 mm square round the intake hole, for the fan's own corner holes.

Foot: two 6.5 mm holes, 9 mm from the upright, 40 mm each side of centre.

Fit: the fan's back face sits flat on the upright, held by four M4 x 45 screws and nuts; the fan blows through the shield side onto the mold.

Two M6 screws hold the foot to the base plate.

Check: the fan is 1 mm clear of the shield side; its guard is fitted.
